Web *term* ApS

Webterm is the company's language platform

Is it called "artificial fibres" or "synthetic fibres"? And what is the correct term in German and Spanish? Avoid irritating misunderstandings and expensive misinterpretations by means of Webterm.

Webterm is the interface to the customized term bank offering all employees the possibility to search for relevant LSP-terms in one or several languages. And that via intranet or internet.
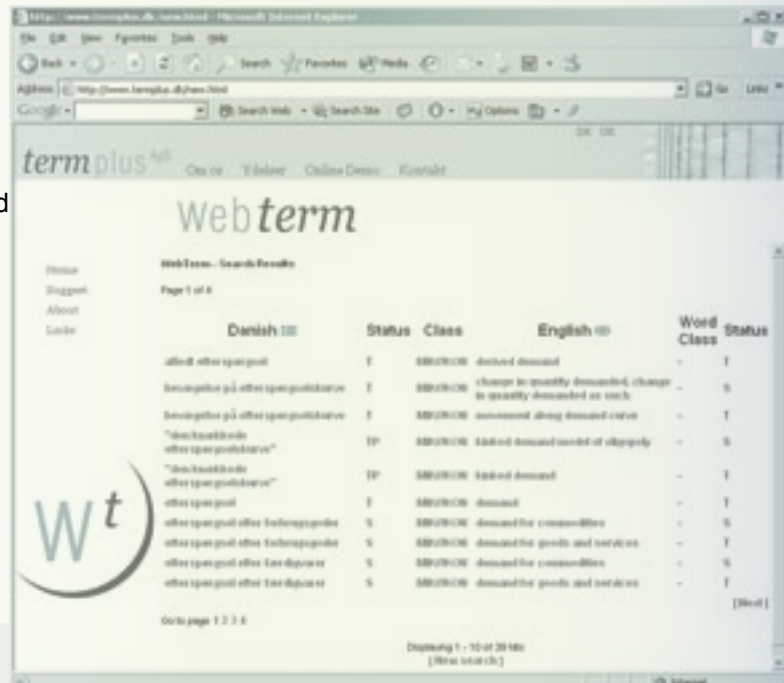

Webterm maintains and develops the company's LSP-terms and its language platform. Webterm is an indispensable tool guaranteeing quality assurance in internal as well as external communication.

The purchase of Webterm also comprises the programme TERMplus, which is necessary for maintenance and updating of Webterm. Webterm can either be maintained by selected staff or by TERMplus ApS.

Here are three Webterm possibilities:

The mini version: The client gets a term bank with standard layout as www.webterm.dk. Database and interface lie physically with TERMplus ApS.

The midi version: The client gets a term bank at e.g.: www.termplus.dk.clientX in the company's own layout. Database and interface lie physically with TERMplus ApS.

The maxi version: The client gets a term bank at e.g. www.clientX.dk/term bank/ in the company's own layout. Database and interface lie physically with the client.

Contact TERMplus ApS to hear which solution is the best for your company.

Flexible solution for your company

TERMplus ApS sells knowledge about LSP-communication by building up mono or multilingual term banks for companies.

Our product TERMplus is software to handle a company's LSP-terms. In this way, the company in question can build up a language basis and knowledge capital.

The system contributes to securing rationalization gain by consistent use of company-specific terms in documentation.

We build up knowledge
